The `styles.css` file contains additions for styling using Tailwind CSS classes. The changes include styles for code blocks, paragraphs, section titles, file name boxes, and review boxes. The styles are well-organized and follow a consistent naming convention.

The added styles enhance the readability and visual appeal of the content by providing appropriate formatting for different elements like code snippets, paragraphs, and section titles. The use of specific classes like `file-name-box` and `review-box` indicates a clear intention to differentiate visual components.

It's recommended to ensure that these styles are applied consistently throughout the project to maintain a cohesive design language. Testing the styles across various screen sizes and content types can help identify any potential layout issues or conflicts with existing styles.

The removal of the `Test code generation - Java.mp4` file seems to be a cleanup task, which is a good practice to keep the project directory organized and free from unnecessary files.

Overall, the style additions in `styles.css` are well-structured and contribute positively to the visual presentation of the content. Make sure to integrate these styles effectively into the project and validate their impact on the user interface.

Feedback on Code Changes:

styles.css:

Good job organizing the styles in the CSS file with clear sections for different elements.
Consider adding comments to explain the purpose of each section or specific styles for better clarity.
Ensure consistency in naming conventions and formatting throughout the file.
The addition of Tailwind utility classes is a good approach for styling elements efficiently.

Test code generation - Java.mp4:

It appears that the video file "Test code generation - Java.mp4" was removed or deleted, which aligns with the commit message.
Make sure to update any references to this video file in the project to avoid broken links or errors.

Overall, the code changes look well-structured and focused on improving the styling of elements in the project. Remember to maintain consistency, add necessary comments, and verify the impact of removing files like the video mentioned in the second change.

Some parts of your patch were truncated as it was larger than 4096 tokens or 15384 characters. The review might not be as complete.
